End-User Mapping: Next Generation Request Routing for Content Delivery

Today at 1:45pm

Practical, Real-time Centralized Control for CDN-based Live **Video** Delivery

A Control-Theoretic Approach for Dynamic Adaptive **Video** Streaming over HTTP

Welcome to the Video Session!

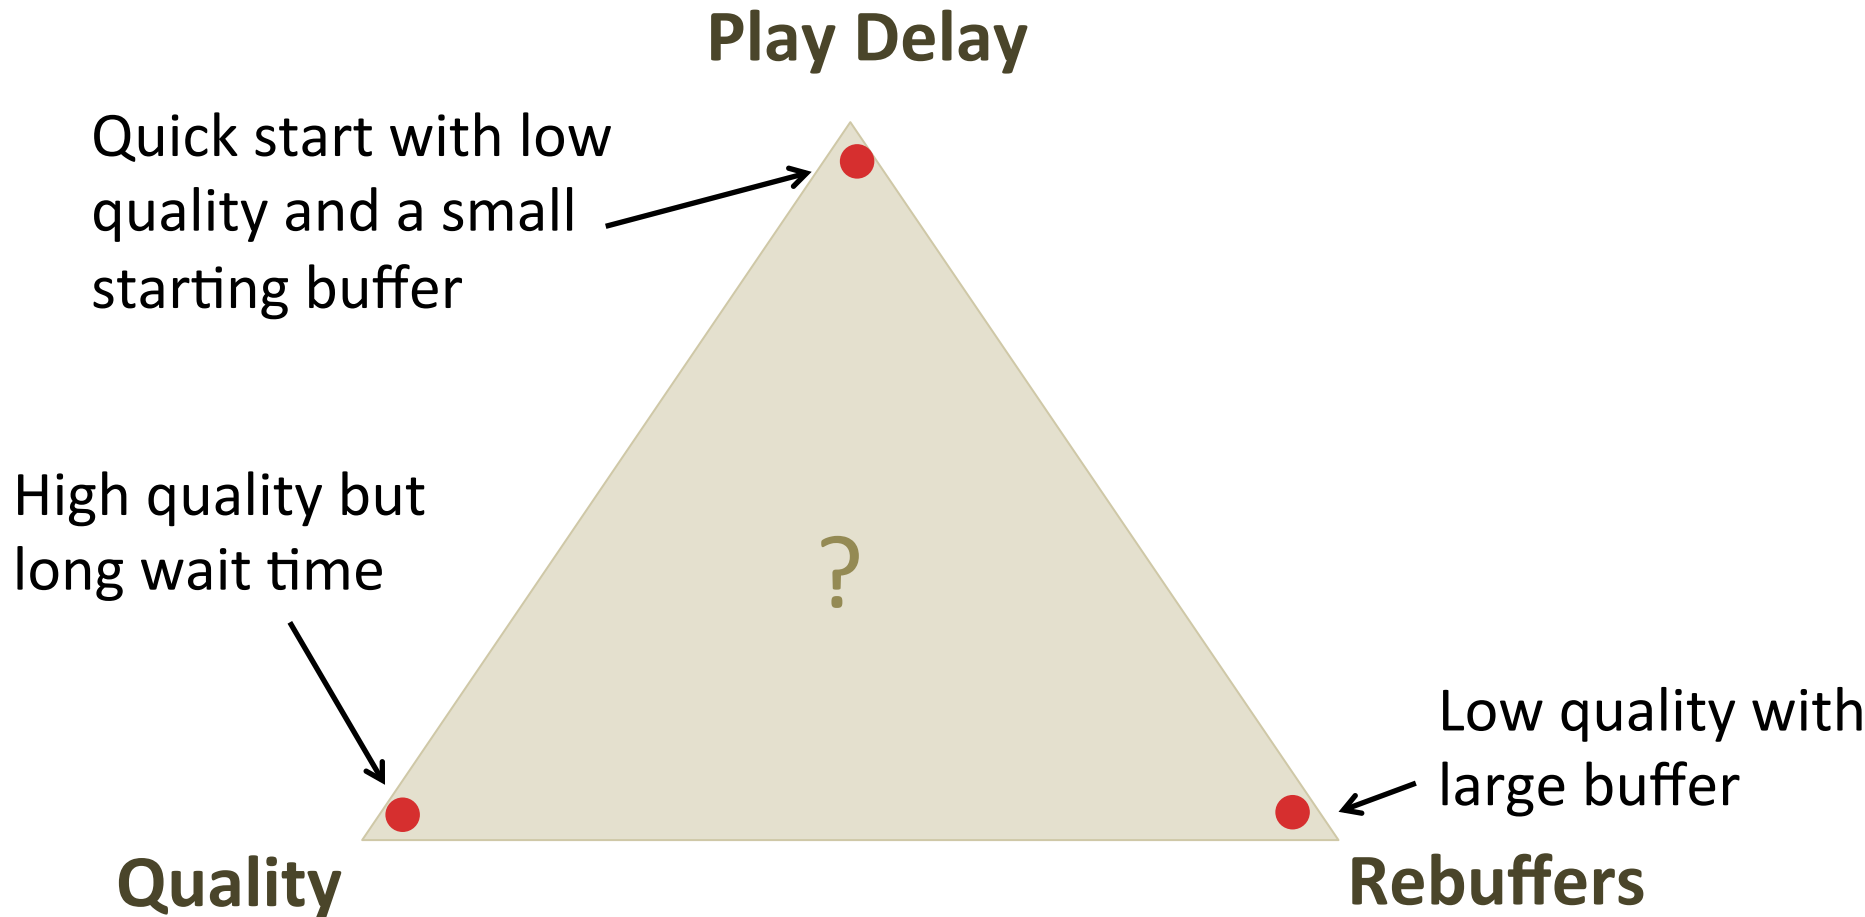

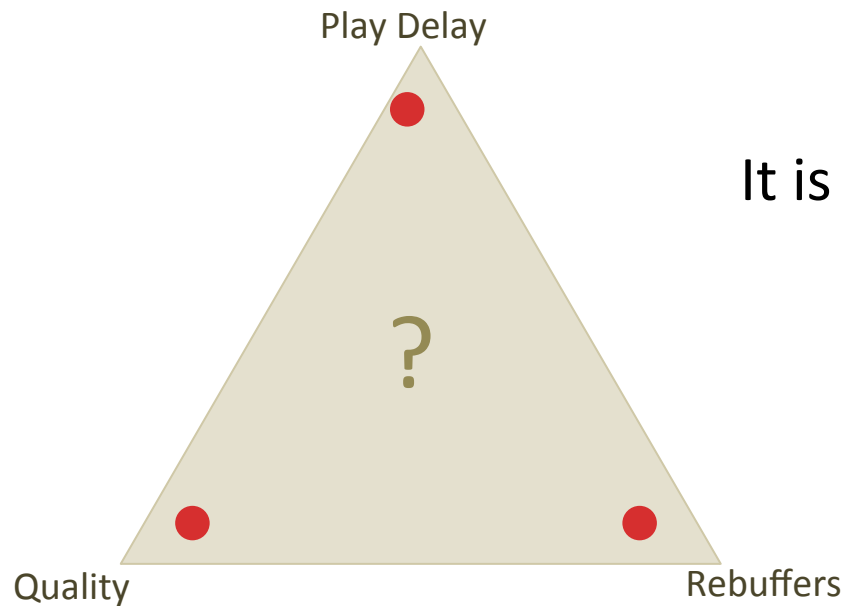

What makes a for good streaming experience?

- Quick start (small **play delay**)
- High Quality (high **video rate**)
- No interruption (no **rebuffer**)

Network conditions change & are hard to predict
so is hard to achieve all three goals!

QoE Metrics & Trade-Offs

It is a hard Problem!

Research Questions:

- Do humans weight one metric more than another?
 - QoE modeling, user studies
- How to better design a video delivery system?

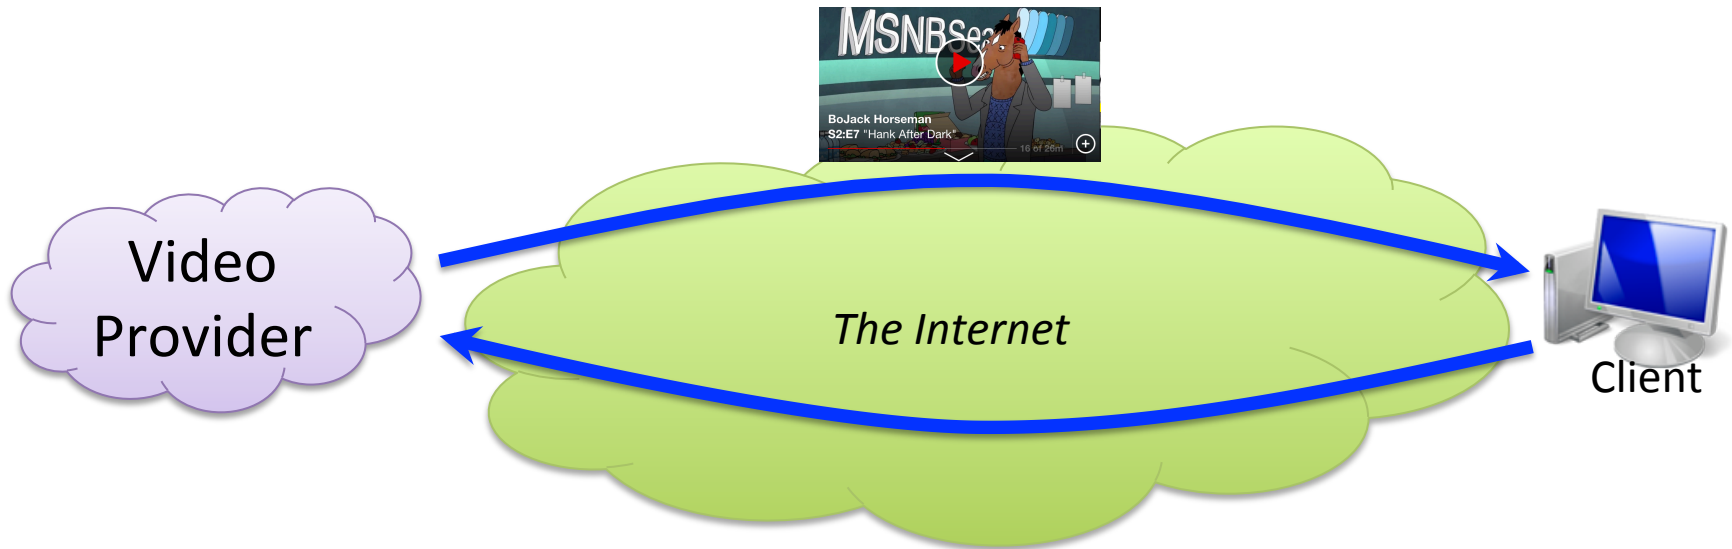

What does a video delivery system look like?

What a video delivery system looks like?

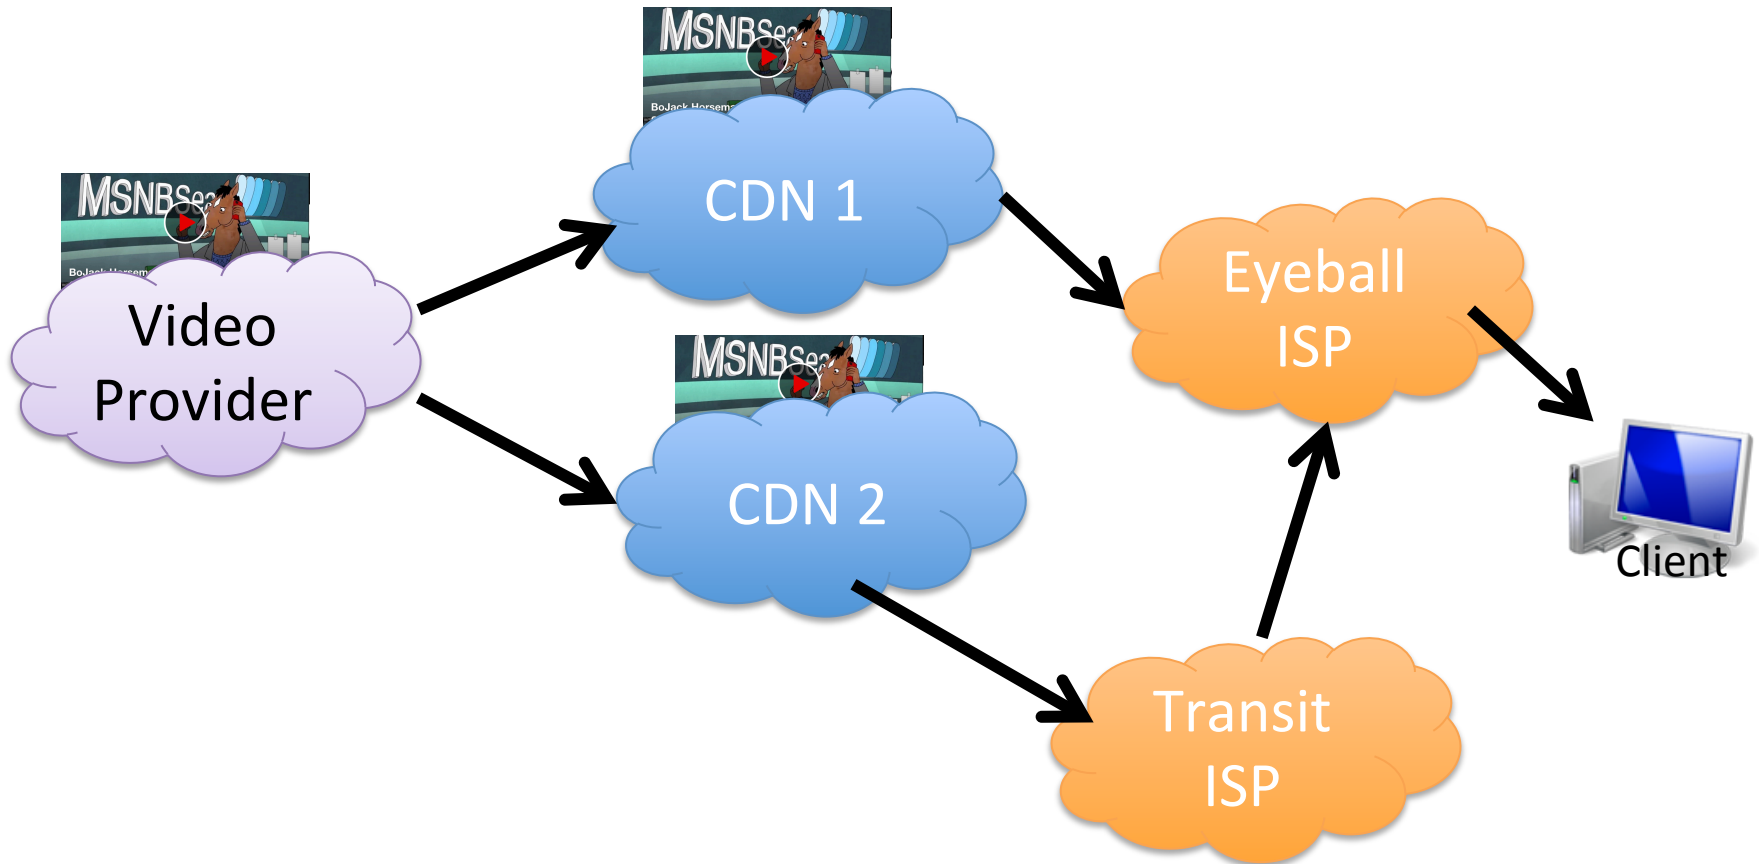

What happens when I click play?

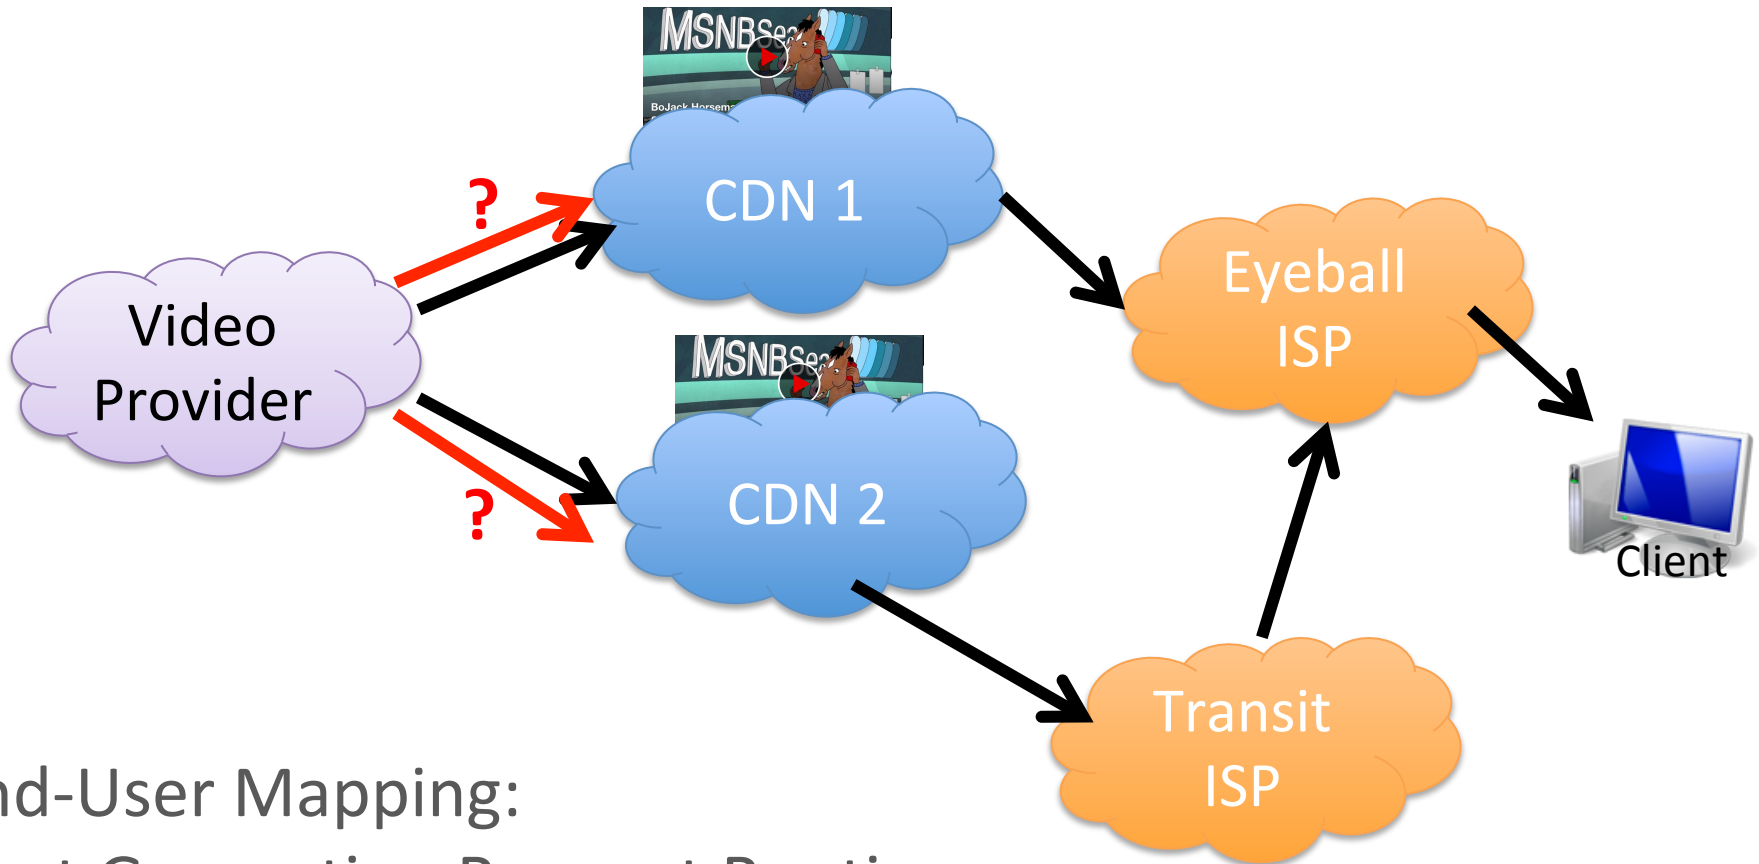

Video Streaming From 10,000 Feet

Video Streaming From 10,000 Feet

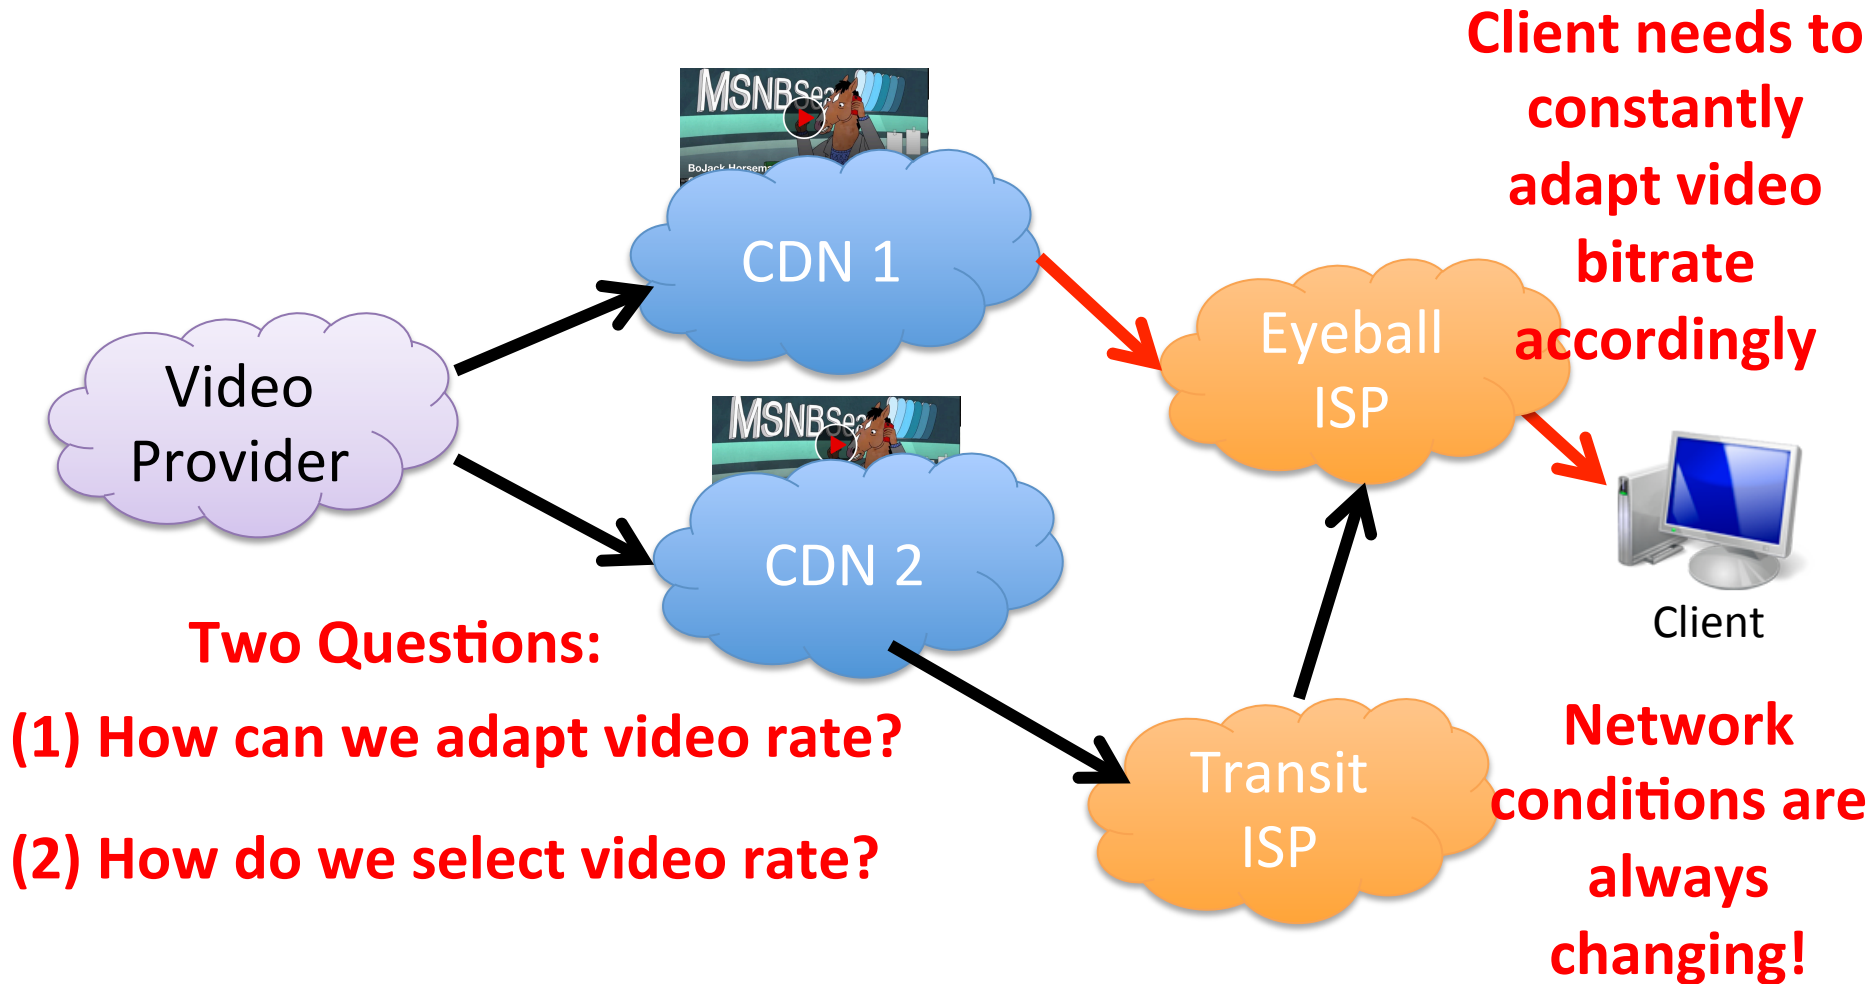

Which CDN to use?

End-User Mapping:
Next Generation Request Routing
for Content Delivery

Which Bitrate a Client Should Request?

How Video Bitrate is Adapted?

- Video is encoded into different quality streams

2 Mbps stream

1 Mbps stream

500 Kbps stream

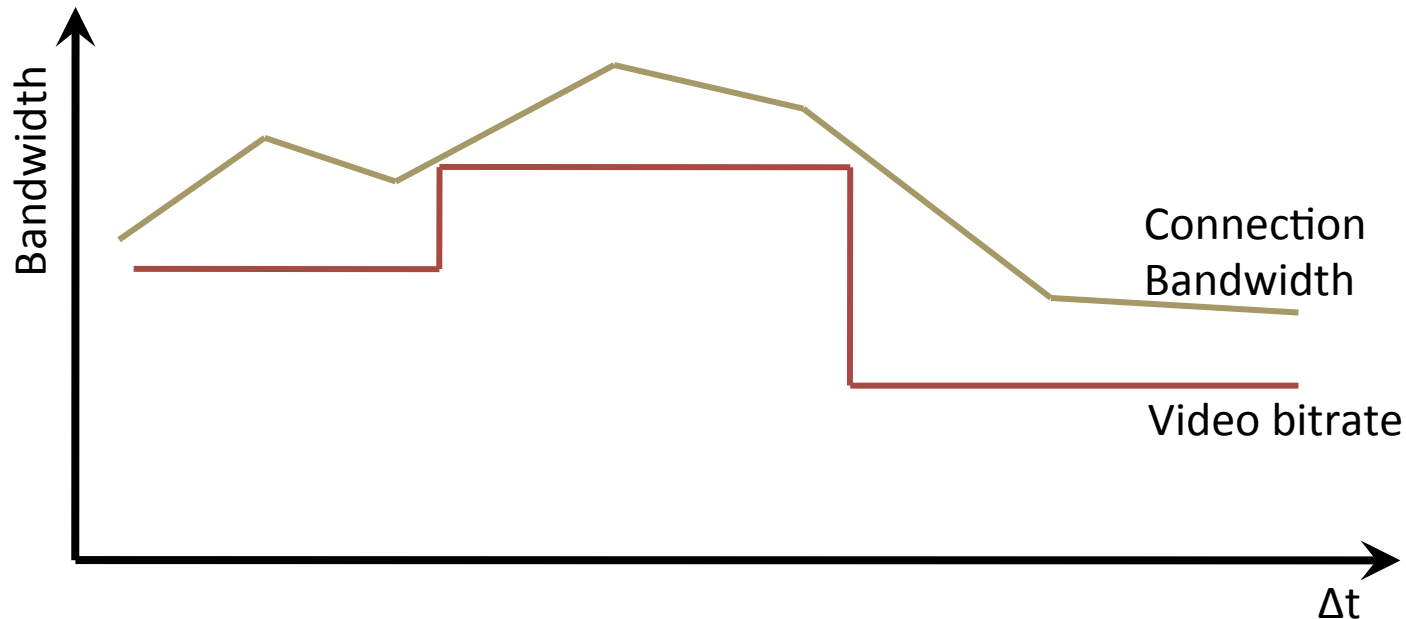

- Client selects video bitrate for each chunk

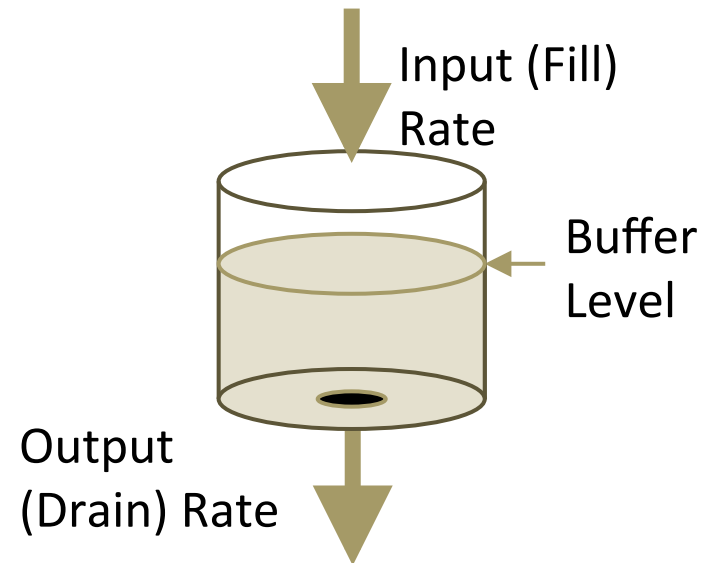

Which Video Bitrate to Select?

- Ideally, if we know the bandwidth
 - Select a video bitrate right under it
- Some people works on bandwidth prediction
 - Network conditions are changing
 - Prediction is hard to get perfectly right

Which Video Bitrate to Select?

- Others work on using video buffer occupancy as a signal
 - Video buffer level is the state variable
 - When just started up,
 - No buffer is available
- Neither buffer or prediction is perfect
 - A Control-Theoretic Approach for Dynamic Adaptive Video Streaming over HTTP
 - Second paper of the session

What about Live Streaming?

- Different challenge: concurrently serving the video to multiple users
 - Each user has different network condition & request a different bitrate
 - How to group users to best use of the resource?
 - Practical, Real-time Centralized Control for CDN-based Live Video Delivery
 - First paper of the video session

To Be Continued ...

- Many more questions need to be answered:
 - Encoding & its interaction with adaptive streaming
 - Better transport
 - Home network ... etc.

Exciting research area!

Real Impact!

Much to do!

- Any questions?
 - Come talk to Maria & TY!
- Want to know more?

Come to Netflix Industrial Demo Session!
