

Mnemosyne

An Immutable Distributed Logging Framework over NDN

Siqi Liu, Philipp Moll, Lixia Zhang (UCLA)

ACM ICN 2021

Requirements for Logging for Distributed System

Objective: to log all events from application for monitoring.

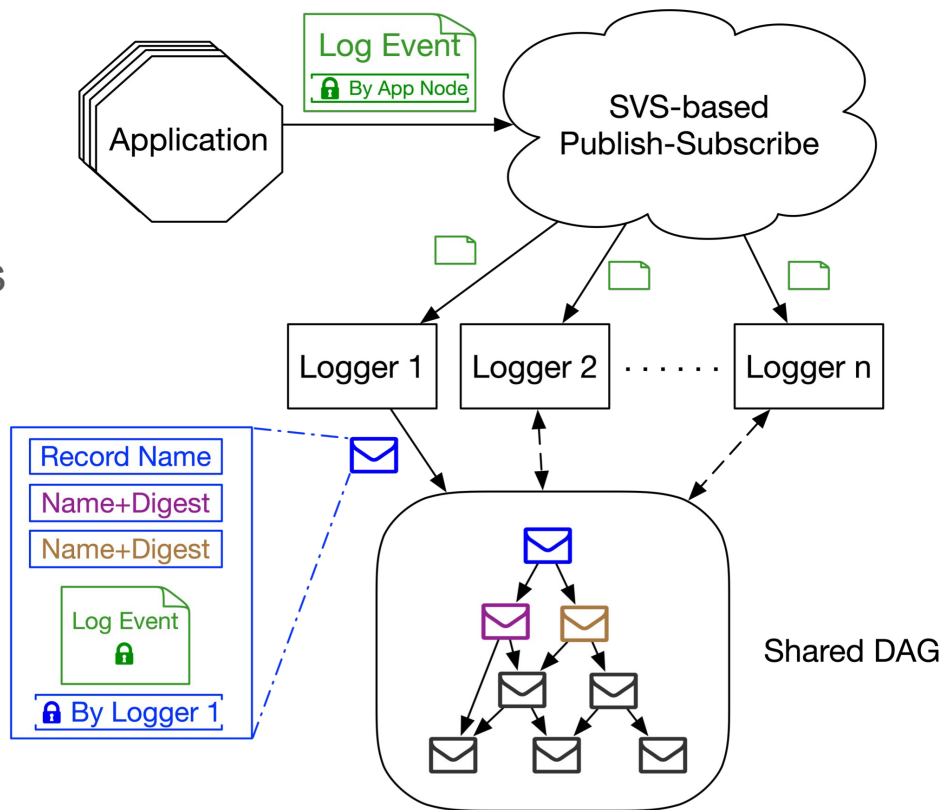

Requirements for distributed logging:

- **Partition Tolerance:** The logger should continue to function in best effort even if there is a network partition.
- **Authenticity:** Only authorized application entities can insert logs.
- **Immutability:** The logged events cannot be modified or removed by anyone.

Mnemosyne

Mnemosyne is designed for above requirements:

- **Partition Tolerance:** equal loggers and replicated logs
- **Authenticity:** by identities and signatures
- **Immutability:** similar DAG-based ledger

Thank you
